Dear Sir/Madame,

The Government of Grenada, as a Small Island Developing State, is particularly vulnerable to the impacts of climate change. Although the global contributions to greenhouse gas emissions are very low, the Government and people of Grenada strive to develop a low-carbon resilient economy. One such initiative that would support such a strategy is the establishment of Standardized Baseline Grid Emission Factor (GEF) for the national grids.

Through a participatory approach, grid emissions factors for Grenada have been calculated/developed.

In my capacity as the Designated National Authority for the Clean Development Mechanism for Grenada, please accept this communication along with the supporting documents for your review and subsequent approval in the context of the Standardized Baseline Grid Emission Factor (GEF) for Grenada.

Kindest Regards,

  
.....  
Christopher Joseph  
DNA for Grenada.
